Automated banking system

An ATM simulation has been created using C++ language and the concepts of OOPs.

To start of with, the account data of 6 account numbers has been created in the database. Each account number has a specific pin code associated with it and also has an initial balance of Rs.50000 to start of with.

The user can:
1. Withdraw money
2. Deposit money
3. Check account balance
4. Change pin code
